## 1.1: PROBLEM DEFINITION

Find: List three common units for each variable:

- a. Volume flow rate (Q), mass flow rate  $(\dot{m})$ , and pressure (p).
- b. Force, energy, power.
- c. Viscosity, surface tension.

# PLAN

Use Table F.1 to find common units

### SOLUTION

a. Volume flow rate, mass flow rate, and pressure.

- Volume flow rate,  $m^3/s$ ,  $ft^3/s$  or cfs, cfm or  $ft^3/m$ .
- Mass flow rate. kg/s, lbm/s, slug/s.
- Pressure. Pa, bar, psi or lbf/in<sup>2</sup>.

b. Force, energy, power.

- Force, lbf, N, dyne.
- Energy, J, ft·lbf, Btu.
- Power. W, Btu/s, ft·lbf/s.
- c. Viscosity.
  - Viscosity,  $Pa \cdot s$ ,  $kg/(m \cdot s)$ , poise.

# **1.2: PROBLEM DEFINITION**

Situation: The hydrostatic equation has three common forms:

$$\frac{p_1}{\gamma} + z_1 = \frac{p_2}{\gamma} + z_2 = \text{ constant}$$
$$p_z = p_1 + \gamma z_1 = p_2 + \gamma z_2 = \text{ constant}$$
$$\Delta p = -\gamma \Delta z$$

<u>Find</u>: For each variable in these equations, list the name, symbol, and primary dimensions of each variable.

# PLAN

Look up variables in Table A.6. Organize results using a table.

SOLUTION		
Name	$\mathbf{Symbol}$	Primary dimensions
pressure	p	$M/LT^2$
specific weight	$\gamma$	$M/L^2T^2$
elevation	z	L
piezometric pressure	$p_z$	$M/LT^2$
change in pressure	$\Delta p$	$M/LT^2$
change in elevation	$\Delta z$	L

# 1.3: PROBLEM DEFINITION

#### <u>Situation</u>:

Five units are specified.

<u>Find</u>:

Primary dimensions for each given unit: kWh, poise, slug, cfm, CSt.

# PLAN

- 1. Find each primary dimension by using Table F.1.
- 2. Organize results using a table.

# SOLUTION

Unit	Associated Dimension	Associated Primary Dimensions
kWh	Energy	$ML^2/T^2$
poise	Viscosity	$M/\left(L\cdot T ight)$
slug	Mass	M
$\operatorname{cfm}$	Volume Flow Rate	$L^3/T$
$\mathrm{cSt}$	Kinematic viscosity	$L/T^2$

#### 1.4: PROBLEM DEFINITION

#### Situation:

The hydrostatic equation is

$$\frac{p}{\gamma} + z = C$$

p is pressure,  $\gamma$  is specific weight, z is elevation and C is a constant.

<u>Find</u>:

Prove that the hydrostatic equation is dimensionally homogeneous.

# PLAN

Show that each term has the same primary dimensions. Thus, show that the primary dimensions of  $p/\gamma$  equal the primary dimensions of z. Find primary dimensions using Table F.1.

#### SOLUTION

1. Primary dimensions of  $p/\gamma$ :

$$\left[\frac{p}{\gamma}\right] = \frac{[p]}{[\gamma]} = \left(\frac{M}{LT^2}\right) \left(\frac{L^2T^2}{M}\right) = L$$

2. Primary dimensions of z:

$$[z] = L$$

3. Dimensional homogeneity. Since the primary dimensions of each term is length, the equation is dimensionally homogeneous. Note that the constant C in the equation will also have the same primary dimension.

# 1.5: PROBLEM DEFINITION

Situation:

Four terms are given in the problem statement.

<u>Find</u>: Primary dimensions of each term.

- a)  $\rho V^2 / \sigma$  (kinetic pressure).
- b) T (torque).
- c) P (power).
- d)  $\rho V^2 L / \sigma$  (Weber number).

# SOLUTION

a. Kinetic pressure:

$$\left[\frac{\rho V^2}{2}\right] = \left[\rho\right] \left[V\right]^2 = \left(\frac{M}{L^3}\right) \left(\frac{L}{T}\right)^2 = \frac{M}{L \cdot T^2}$$

b. Torque.

[Torque] = [Force] [Distance] = 
$$\left(\frac{ML}{T^2}\right)(M) = \frac{M^2 \cdot L}{T^2}$$

c. Power (from Table F.1).

$$[P] = \frac{M \cdot L^2}{T^3}$$

d. Weber Number:

$$\left[\frac{\rho V^2 L}{\sigma}\right] = \frac{\left[\rho\right] \left[V\right]^2 \left[L\right]}{\left[\sigma\right]} = \frac{\left(M/L^3\right) \left(L/T\right)^2 \left(L\right)}{\left(M/T^2\right)} = \left[\right]$$

Thus, this is a dimensionless group

## 1.6: PROBLEM DEFINITION

#### <u>Situation</u>:

The power provided by a centrifugal pump is given by:

$$P = \dot{m}gh$$

#### <u>Find</u>:

Prove that the above equation is dimensionally homogenous.

# PLAN

1. Look up primary dimensions of P and  $\dot{m}$  using Table F.1.

2. Show that the primary dimensions of P are the same as the primary dimensions of  $\dot{m}gh$ .

## SOLUTION

1. Primary dimensions:

$$[P] = \frac{M \cdot L^2}{T^3}$$
$$[\dot{m}] = \frac{M}{T}$$
$$[g] = \frac{L}{T^2}$$
$$[h] = L$$

2. Primary dimensions of  $\dot{m}gh$ :

$$[\dot{m}gh] = [\dot{m}][g][h] = \left(\frac{M}{T}\right)\left(\frac{L}{T^2}\right)(L) = \frac{M \cdot L^2}{T^3}$$

Since  $[\dot{m}gh] = [P]$ , The power equation is dimensionally homogenous.

### 1.7: PROBLEM DEFINITION

Situation:

Two terms are specified.

a. 
$$\int \rho V^2 dA$$
.  
b.  $\frac{d}{dt} \int_{\mathcal{V}} \rho V d\mathcal{V}$ .

<u>Find</u>:

Primary dimensions for each term.

# PLAN

1. To find primary dimensions for term a, use the idea that an integral is defined using a sum.

2. To find primary dimensions for term b, use the idea that a derivative is defined using a ratio.

### SOLUTION

Term a:

$$\left[\int \rho V^2 dA\right] = \left[\rho\right] \left[V^2\right] \left[A\right] = \left(\frac{M}{L^3}\right) \left(\frac{L}{T}\right)^2 \left(L^2\right) = \boxed{\frac{ML}{T^2}}$$

Term b:

$$\left[\frac{d}{dt}\int_{\mathcal{V}}\rho Vd\mathcal{V}\right] = \frac{\left[\int\rho Vd\mathcal{V}\right]}{[t]} = \frac{\left[\rho\right]\left[V\right]\left[\mathcal{V}\right]}{[t]} = \frac{\left(\frac{M}{L^3}\right)\left(\frac{L}{T}\right)\left(L^3\right)}{T} = \boxed{\frac{ML}{T^2}}$$

Problem 1.8

No solution provided.

## 1.9: PROBLEM DEFINITION

Apply the grid method.

Situation:

Density of ideal gas is given by:

$$\rho = \frac{p}{RT}$$

p = 35 psi, R = 1716 ft- lbf/ slug- °R. T = 100 °F = 560 °R.

<u>Find</u>:

Calculate density (in  $lbm/ft^3$ ).

# PLAN

Follow the process given in the text. Look up conversion ratios in Table F.1.

### SOLUTION

(note: unit cancellations not shown).

$$\rho = \frac{p}{RT}$$

$$= \left(\frac{35 \,\mathrm{lbf}}{\mathrm{in}^2}\right) \left(\frac{12 \,\mathrm{in}}{\mathrm{ft}}\right)^2 \left(\frac{\mathrm{slug} \cdot \mathrm{^o R}}{1716 \,\mathrm{ft} \cdot \mathrm{lbf}}\right) \left(\frac{1.0}{560 \,\mathrm{^o R}}\right) \left(\frac{32.17 \,\mathrm{lbm}}{1.0 \,\mathrm{slug}}\right)$$

$$\rho = 0.169 \,\mathrm{lbm/\,ft^3}$$

### 1.10: PROBLEM DEFINITION

Apply the grid method.

Situation:

Wind is hitting a window of building.  $\Delta p = \frac{\rho V^2}{2},$   $\rho = 1.2 \text{ kg/m}^3, \quad V = 60 \text{ mph.}$ 

Find:

- a. Express the answer in pascals.
- b. Express the answer in pounds force per square inch (psi).
- c. Express the answer in inches of water column (inch  $H_20$ ).

# PLAN

Follow the process for the grid method given in the text. Look up conversion ratios in Table F.1.

### SOLUTION

a) \_\_\_\_\_

Pascals.

$$\Delta p = \frac{\rho V^2}{2}$$

$$= \frac{1}{2} \left( \frac{1.2 \text{ kg}}{\text{m}^3} \right) \left( \frac{60 \text{ mph}}{1.0} \right)^2 \left( \frac{1.0 \text{ m/s}}{2.237 \text{ mph}} \right)^2 \left( \frac{\text{Pa} \cdot \text{m} \cdot \text{s}^2}{\text{kg}} \right)$$

$$\Delta p = 432 \text{ Pa}$$
b)

Pounds per square inch.

$$\Delta p = 432 \operatorname{Pa} \left( \frac{1.450 \times 10^{-4} \operatorname{psi}}{\operatorname{Pa}} \right)$$
$$\Delta p = 0.0626 \operatorname{psi}$$

c) \_\_\_\_\_

Inches of water column

$$\Delta p = 432 \operatorname{Pa}\left(\frac{0.004019 \text{ in-H20}}{\operatorname{Pa}}\right)$$
$$\Delta p = 1.74 \text{ in-H20}$$

### 1.11: PROBLEM DEFINITION

Apply the grid method.

#### Situation:

Force is given by F = ma. a)  $m = 10 \text{ kg}, a = 10 \text{ m/s}^2$ . b)  $m = 10 \,\text{lb}, a = 10 \,\text{ft}/\text{s}^2$ . c) m = 10 slug, a = 10 ft/s<sup>2</sup>.

#### Find:

Calculate force.

# PLAN

Follow the process for the grid method given in the text. Look up conversion ratios in Table F.1.

### SOLUTION

a) \_\_\_\_

Force in newtons for m = 10 kg and  $a = 10 \text{ m/s}^2$ .

$$F = ma$$
  
=  $(10 \text{ kg}) \left(10 \frac{\text{m}}{\text{s}^2}\right) \left(\frac{\text{N} \cdot \text{s}^2}{\text{kg} \cdot \text{m}}\right)$   
$$F = 100 \text{ N}$$

b) \_\_\_\_\_

Force in lbf for m = 10 lbm and a = 10 ft/s<sup>2</sup>.

$$F = ma$$
  
= (10 lbm)  $\left(10\frac{\text{ft}}{\text{s}^2}\right) \left(\frac{\text{lbf} \cdot \text{s}^2}{32.2 \text{ lbm} \cdot \text{ft}}\right)$   
$$F = 3.11 \text{ lbf}$$

Force in newtons for m = 10 slug and acceleration is a = 10 ft/s<sup>2</sup>.

$$F = ma$$
  
=  $(10 \text{ slug}) \left( 10 \frac{\text{ft}}{\text{s}^2} \right) \left( \frac{\text{lbf} \cdot \text{s}^2}{\text{slug} \cdot \text{ft}} \right) \left( \frac{4.448 \text{ N}}{\text{lbf}} \right)$   
$$F = 445 \text{ N}$$

# 1.12: PROBLEM DEFINITION

Apply the grid method.

Situation:

A cyclist is travelling along a road. P = FV.V = 24 mi/ h, F = 5 lbf.

 $\underline{\text{Find}}$ :

- a) Find power in watts.
- b) Find the energy in food calories to ride for 1 hour.

# PLAN

Follow the process for the grid method given in the text. Look up conversion ratios in Table F.1.

SOLUTION

a) \_\_\_\_

Power

$$P = FV$$
  
= (5 lbf)  $\left(\frac{4.448 \text{ N}}{\text{lbf}}\right)$  (24 mph)  $\left(\frac{1.0 \text{ m/s}}{2.237 \text{ mph}}\right) \left(\frac{\text{W} \cdot \text{s}}{\text{N} \cdot \text{m}}\right)$   
$$P = 239 \text{ W}$$

b) \_\_\_\_\_

Energy

$$\Delta E = P\Delta t$$

$$= \left(\frac{239 \,\mathrm{J}}{\mathrm{s}}\right) (1 \,\mathrm{h}) \left(\frac{3600 \,\mathrm{s}}{\mathrm{h}}\right) \left(\frac{1.0 \,\mathrm{calorie} \,\mathrm{(nutritional)}}{4187 \,\mathrm{J}}\right)$$

$$\Delta E = 205 \,\mathrm{calories}$$

# 1.13: PROBLEM DEFINITION

Apply the grid method.

### <u>Situation</u>:

A pump operates for one year. P = 20 hp. The pump operates for 20 hours/day. Electricity costs 0.10/kWh.

#### <u>Find</u>:

The cost (U.S. dollars) of operating the pump for one year.

# PLAN

1. Find energy consumed using E = Pt, where P is power and t is time.

2. Find cost using  $C = E \times (\$0.1/\text{kWh})$ .

## SOLUTION

1. Energy Consumed

$$E = Pt$$

$$= (20 \text{ hp}) \left(\frac{W}{1.341 \times 10^{-3} \text{ hp}}\right) \left(\frac{20 \text{ h}}{\text{d}}\right) \left(\frac{365 \text{ d}}{\text{y}}\right)$$

$$= 1.09 \times 10^8 \text{ W} \cdot \text{h} \left(\frac{\text{kWh}}{1000 \text{ W} \cdot \text{h}}\right)$$

$$E = 1.09 \times 10^5 \text{ kWh}$$

2. Cost

$$C = E(\$0.1/\text{kWh})$$
  
=  $(1.09 \times 10^8 \text{ kWh}) \left(\frac{\$0.10}{\text{kWh}}\right)$   
$$C = \$10,900$$
